

# DCS SIP Trunking

Save up to 90% on  
business communication costs!

## SIP Trunking

SIP Trunking is a Voice over IP (VoIP) phone solution. Unlike the old physical leased lines, it uses cloud-based technology to deliver telephone services and unified communications to businesses equipped with on premise SIP-based IP-PBXs and/or VoIP supported gateways. SIP Trunking is a great way for customers who are not ready to migrate to the cloud to bring their voice and data services together, using their existing PBX and IP connection.

By merging communications, businesses save considerably on their telecommunications and infrastructure costs.

## Advantages:

### Cost Savings

- Replace costly legacy systems
- No more separate connections
- No dedicated phone lines required

### Localization

- Virtual numbers from 50+ countries
- Connect multiple sites/remote workers
- Centralize hardware in one location

### Flexibility

- Compatible with most IP-enabled PBXs
- Scale capacity up or down as needed
- Unlimited calling plans to 20+ countries

## Compatibility:
